about the author

VILHELM AUBERT is Professor of Sociology of Law and is on the Faculty of Law at the University of Oslo and Research Director of Oslo's famed Institute for Social Research. He received his degrees in law and sociology from the University of Oslo. He studied under a Rockefeller scholarship during 1946-1948 and during 1956-1957 was a fellow at the Center for Advanced Study in the Behavioral Sciences at Stanford University. In 1955 he was elected to membership in the Norwegian Academy of Sciences. Professor Aubert is the author of many books in Norwegian and his most recent book, *The Hidden Society*, was published in this country last year.

elements of sociology

VILHELM AUBERT

*University of Oslo, Oslo, Norway
Institute for Social Research, Oslo, Norway*

This new book for early courses in sociology not only introduces the reader to the basic elements of sociology, but also gives him a thorough understanding of the sociological approach to psychological and social phenomena. Integral to the text at all points is its concentration upon sociology as an approach and a way of thinking about society. Concomitant with this is its avoidance of the all too prevalent limited view of sociology which relies solely upon the transmission of mere factual information and description of social institutions as an introduction to this vast and complicated field. In many respects the book represents a synthesis of the most far-reaching new trends in American and European sociological thought — this alone will assure its place as an extremely valuable supplementary text for the more advanced student of sociology.

The book begins with the relatively simple sociological-psychological phenomena which arise as the result of the interaction of two people. This relationship of ego and alter (I and other) is then used throughout the text as a model by which more complex sociological relationships such as social norms, roles, systems, and rank can be described in a simplified form. In the last chapter of the book these sociological concepts are applied to give a thorough analysis of selected social organizations (the factory, the hospital, the rural community, etc.) in order to show the student how this approach to sociological investigation works to bring about a clearer and more meaningful understanding of the complexity of man's social life.
